ComputerProx Announces the Addition of ProxMat to its Line of Automated Locking Solutions

*The new ProxMat gives kiosk and workstation users the
means to automatically lock the system when walking away*

Chicago, February 25, 2008 – ComputerProx, the leader in post authentication solutions, today announced the general availability of ProxMat, the industry's first *USB based pressure sensitive mat* for automated workstation locking.

Recognizing that today's PC based kiosk environments require a balance between security and ease of use, the ProxMat helps automate the session ending process by locking the kiosk thus assuring no personal information is exposed. Using the ProxMat adds a new dimension of convenience to kiosks by signing off the user or locking the workstation as soon as they step away. Kiosk manufacturers now have the flexibility to offer solutions in high traffic areas and still provide user privacy and security.

The ProxMat is placed on the floor in front of the workstation or Kiosk. When the user leaves the proximity of the kiosk, the ProxMat ends the session without any user intervention. "The ProxMat is an enabling technology," said Tom Crowley, Vice President of ComputerProx. "Much of the anxiety using publicly placed kiosks, surround user privacy. By automating the session ending process, users are assured none of their personal information is left behind." The ProxMat is also a great solution for healthcare environments where HIPAA compliance and locking of unattended workstations is essential.

Easy To Use Out of the Box Solution
For the kiosk developer, the implementation couldn't be easier. ProxMat connects via the USB and the operating system identifies it as a keyboard. No additional drivers are needed. The developer simply defines the keystrokes used to end the session and using the ComputerProx *KIT* (Keyboard Interface Technology) programs them into the ProxMat. Now each time a user leaves the kiosk, the ProxMat will initiate the proper key sequence and lock the system. The ProxMat comes in several sizes and finishes to meet any unique situation.

About ComputerProx
ComputerProx, an innovator in post authentication and walk away security, is dedicated to simplifying the user experience by helping organizations enforce policies and maintain the integrity of their security solutions. ComputerProx offers a full line of presence detection solutions to meet the needs of every environment. For more information on the company and products visit www.computerprox.com
